

Barrick Gold of Australia Ltd has been using the *PressurePro* wireless Tyre Pressure Monitoring System in both WA and Queensland. Dave Pafflin of Barrick states:

"Barrick Gold of Australia Ltd has been using the PressurePro wireless Tyre Pressure Monitoring System for over 6 months at its Osborne gold-copper mine Queensland, as well as one of its mines in Western Australia. The product has been found to be accurate, durable and easy to install, with no special tools required. Unlike any manual system it operates 24/7 and while the vehicle is moving. Drivers have been alerted to under-inflated tyres, thereby saving both tyres and downtime." (Installed on a CAT AD 55 Dump Trucks.)
